

Current Mindous Build Audit

Document Purpose: Comprehensive audit of the current Mindous build at <https://1393145f4.preview.abacusai.app>, documenting all UI elements, agent platform-specific features, and creating a removal/modification checklist for redesign.

Date: November 17, 2025

Application URL: <https://1393145f4.preview.abacusai.app>

Project Path: /home/ubuntu/mindous/

Executive Summary

The current Mindous build is a **Multi-LLM AI Agent Orchestration Platform** that routes tasks across multiple AI providers (Abacus AI, ChatGPT, Claude, Gemini, Qwen). The application features:

- **Landing Page:** Marketing site showcasing multi-LLM capabilities
- **Dashboard:** Task composition interface with LLM provider selection
- **Task Management:** Task history, live monitoring, analytics
- **Settings:** Account settings (placeholder)
- **Agent-Specific Features:** Task decomposition, intelligent routing, provider status tracking

Key Finding: The current build is heavily focused on **agent orchestration** and **multi-LLM routing**, which needs to be completely removed or redesigned to match the Abacus.AI platform's simpler, more transparent task execution model.

1. Current Application Structure

File System Overview

```

      └─ schema/ # ⚠ EVALUATE (database schema)

```

Total Files:

- App pages: 30 TSX files
- Components: 80 TSX files
- Total TypeScript files: 9,826 (including node_modules)

2. Landing Page Audit

Current Landing Page (/)

Hero Section

Orchestrate Complex Tasks Across Multiple AI Models

Mindous.ai intelligently routes each subtask to the optimal LLM provider—whether it's Abacus AI, ChatGPT, Claude, Gemini, or Qwen—ensuring peak performance and cost efficiency.

[Start Multi-LLM Workspace →]

Status: ✗ **REMOVE** - Entire multi-LLM messaging needs to be replaced

Issues:

- Focuses on “orchestration” and “multiple AI models”
- Mentions specific LLM providers (Abacus AI, ChatGPT, Claude, Gemini, Qwen)
- CTA button says “Start Multi-LLM Workspace”

Replacement Needed:

- Simple, clear messaging about AI agent capabilities
- Focus on task execution, not provider routing
- CTA: “Start Building” or “Get Started”

Features Section

Current features highlight:

1. ✗ **Intelligent Task Orchestration** - “Break down complex tasks into optimized subtasks, each routed to the best-suited LLM provider”
2. ✗ **Multi-Provider Routing Engine** - “Our sophisticated routing algorithm considers performance, cost, and capability metrics”
3. ✗ **Performance & Cost Analytics** - “Track usage, performance, and costs across all LLM providers”
4. ✓ **Enterprise-Grade Reliability** - Can be kept with modified copy

Status: ⚠ **MODIFY** - Rewrite all feature descriptions to remove multi-LLM focus

Testimonials Section

Current testimonials mention:

- “Mindous.ai reduced our AI costs by 65% while improving output quality”

- “The intelligent routing is game-changing”
- References to Claude, GPT-4, specific providers

Status: ⚠️ **MODIFY** - Rewrite testimonials to focus on general AI capabilities

LLM Providers Section

Shows badges for:

- Abacus AI
- ChatGPT (GPT-4 & GPT-4o Models)
- Claude (Anthropic)
- Gemini (Google)
- Qwen (Alibaba Cloud)

Status: ❌ **REMOVE ENTIRE SECTION**

Footer

Standard footer with links to:

- Multi-LLM Workspace
- Pricing
- Documentation
- About

Status: ⚠️ **MODIFY** - Update “Multi-LLM Workspace” link text

3. Dashboard Audit

Dashboard Page (/dashboard)

Current Layout

Multi-LLM Workspace

Orchestrate **complex** tasks across multiple AI providers with intelligent routing

[Compose Task] [Live Monitor] [Task History] [Analytics]

New Task Specification

Task Title *

[Input: e.g., Build a React todo app...]

Detailed Description

[Textarea: Additional context...]

LLM Configuration

Primary LLM Provider: [Auto-Route (Recommended) ▼]

Task Type: [General Action ▼]

Priority Level: [Medium Priority ▼]

Execution Options

☒ Task Decomposition

[Submit Task]

Provider Status

[Abacus AI - Online] [ChatGPT - Online] [Claude - Online]

[Gemini - Slow] [Qwen - Online]

Today's Usage

API Calls: 2,847 | Cost: \$12.34 | Avg Time: 1.2s

Issues Identified

1. Header Text:

- ✗ "Multi-LLM Workspace"
- ✗ "Orchestrate complex tasks across multiple AI providers with intelligent routing"
- **Fix:** Change to simple "Dashboard" or "Workspace"

2. LLM Configuration Section:

- ✗ "Primary LLM Provider" dropdown
- ✗ "Auto-Route (Recommended)" option
- **Fix:** Remove entire LLM provider selection

3. Task Decomposition Toggle:

- ⚠ May keep if it's a useful feature
- **Evaluate:** Does Abacus platform have task decomposition?

4. Provider Status Section:

- ❌ Shows status of multiple LLM providers
- **Fix:** Remove entire section

5. Today's Usage Section:

- ⚠️ API calls, cost, avg time
- **Evaluate:** Keep if relevant to single-agent model

Tab Navigation

- ✅ **Compose Task** - Keep (rename to "New Task"?)
- ⚠️ **Live Monitor** - Evaluate (is this task execution view?)
- ✅ **Task History** - Keep
- ✅ **Analytics** - Keep (modify to remove multi-LLM focus)

4. Sidebar Navigation Audit

Current Sidebar Items

[Home Icon]		
Home	←	/dashboard
[Settings Icon]		
Settings	←	/dashboard/settings
[Database Icon]		
Data source	←	/dashboard/data-source
[Target Icon]		
Targets	←	/dashboard/targets
[Users Icon]		
Members	←	/dashboard/members

Evaluation

Nav Item	Current Route	Status	Notes
Home	/dashboard	✅ KEEP	Main dashboard/workspace
Settings	/dashboard/settings	✅ KEEP	Account settings
Data source	/dashboard/data-source	⚠️ EVALUATE	What is this for?
Targets	/dashboard/targets	⚠️ EVALUATE	What is this for?
Members	/dashboard/members	✅ KEEP	Team management

Missing Items (from Abacus mapping)

- **Tasks** - Should add explicit tasks page
- **Analytics** - Should add to sidebar
- **Tools** - Exists at `/dashboard/tools` but not in sidebar

Recommendations

1.  Keep: Home, Settings, Members
2.  Evaluate: Data source, Targets (understand purpose first)
3.  Add: Tasks, Analytics (if not already accessible)
4.  Consider: Tools (if relevant)

5. Header Component Audit

Current Header Structure

Navigation Items

From `components/header.tsx` :

```
{ name: 'Workspace', href: '/dashboard', icon: Brain,
  description: 'Multi-LLM Task Orchestration' }, //  REMOVE description
{ name: 'Pricing', href: '/pricing', icon: DollarSign,
  description: 'View Plans' }, //  KEEP
{ name: 'Documentation', href: '/docs', icon: BookOpen,
  description: 'Learn More' }, //  KEEP
```

Issues

1.  “Multi-LLM Task Orchestration” description
2.  “Workspace” name (consider “Dashboard” or keep as is)

Recommendations

- Update “Workspace” description to remove “Multi-LLM”
- Keep overall structure (logo, nav, user menu)

6. Agent-Specific Features to Remove

6.1 Multi-LLM Workspace Component

File: `components/llm/multi-llm-workspace.tsx`

Status:  **DELETE FILE**

Reason: Entire component is dedicated to multi-LLM provider selection and routing.

6.2 LLM Performance Dashboard

File: components/llm/llm-performance-dashboard.tsx

Status: ❌ DELETE FILE

Reason: Shows performance metrics across multiple LLM providers.

6.3 Task Decomposition Components

Files:

- components/planning/task-decomposition-view.tsx
- components/planning/task-node-card.tsx
- components/planning/task-tree.tsx

Status: ❌ DELETE FILES

Reason: These are specific to the agent orchestration model where tasks are broken down into subtasks and routed to different providers.

Note: If Abacus platform has task decomposition, we may need to rebuild these components with different logic.

6.4 Task Form with Planning

File: components/task-form-with-planning.tsx

Status: ❌ DELETE FILE or ⚠️ HEAVILY MODIFY

Reason: Includes LLM provider selection and task decomposition options.

6.5 LLM Test Page

File: app/(dashboard)/llm-test/page.tsx

Status: ❌ DELETE FILE

Reason: Test page for multi-LLM routing system.

6.6 Test Pages

Files:

- app/test-task-form/page.tsx
- app/test-run-progress/page.tsx

Status: ❌ DELETE FILES

Reason: Test/development pages not needed in production.

6.7 Marketing Components

Files:

- app/(marketing)/components/multi-llm-hero.tsx
- app/(marketing)/components/llm-providers-section.tsx

Status: ❌ DELETE FILES

Reason: Specific to multi-LLM marketing messaging.

7. Components to Keep & Modify

7.1 Chat Interface

Files:

- components/chat/chat-interface.tsx
- components/chat/message-list.tsx

Status: ⚠️ **MODIFY**

Changes Needed:

- Remove references to “Multi-LLM” in UI text
- Remove provider selection if present
- Keep core chat functionality

7.2 Progress Components

Files:

- components/progress/ (directory)

Status: ⚠️ **EVALUATE**

Reason: May contain useful progress tracking components that align with Abacus’s real-time progress streaming. Need to review contents.

7.3 Runs Components

Files:

- components/runs/ (directory)

Status: ⚠️ **EVALUATE**

Reason: May contain task execution/run tracking components. Need to review contents.

7.4 Tools Components

Files:

- components/tools/ (directory)

Status: ⚠️ **EVALUATE**

Reason: May contain tool usage tracking components that align with Abacus’s tool visibility panel. Need to review contents.

7.5 Dashboard Page

File: app/dashboard/page.tsx

Status: ⚠️ **MODIFY**

Changes Needed:

- Remove “Multi-LLM Workspace” header
- Remove LLM provider selection dropdown
- Remove provider status section
- Simplify to single task composition form
- Keep task history, analytics tabs

7.6 Analytics Page

File: app/dashboard/analytics/page.tsx

Status: ⚠️ **MODIFY**

Changes Needed:

- Remove provider-specific metrics
- Focus on overall task performance
- Keep cost tracking if relevant

8. Database Schema Evaluation

Current Schema Files

db/schema/	
├─ profiles-schema.ts	# ✅ KEEP
├─ llm-routing.ts	# ❌ REMOVE (multi-LLM specific)
├─ tasks-schema.ts	# ⚠️ EVALUATE
├─ subtasks-schema.ts	# ⚠️ EVALUATE
├─ usage-logs-schema.ts	# ⚠️ EVALUATE
└─ ...	

Recommendations

1. ❌ **Remove:** Any schema related to LLM provider routing, selection, or comparison
 2. ✅ **Keep:** User profiles, authentication, billing
 3. ⚠️ **Evaluate:** Task/subtask schemas (may need modification)
-

9. Comparison: Current vs Target (Abacus)

Landing Page

Element	Current (Mindous)	Target (Abacus)	Action
Hero Message	“Orchestrate Complex Tasks Across Multiple AI Models”	Simple, clear AI agent messaging	✗ REPLACE
CTA Button	“Start Multi-LLM Workspace”	“Get Started” / “Start Building”	✗ REPLACE
Features	Multi-LLM routing, cost optimization, provider comparison	Task execution, transparency, reliability	✗ REWRITE
Provider Badges	Shows 5+ LLM providers	Not present	✗ REMOVE
Testimonials	Mentions specific providers	General AI capabilities	⚠ MODIFY

Dashboard

Element	Current (Mindous)	Target (Abacus)	Action
Page Title	“Multi-LLM Workspace”	“Dashboard” / “Workspace”	✗ REPLACE
Description	“Orchestrate complex tasks across multiple AI providers”	Simple description or none	✗ REPLACE
Task Form	Includes LLM provider dropdown	Simple task input	✗ SIMPLIFY
Provider Status	Shows status of 5+ providers	Not present	✗ REMOVE
Usage Stats	API calls, cost, avg time per provider	Overall usage stats	⚠ MODIFY
Task Decomposition	Toggle option	May or may not exist	⚠ EVALUATE

Sidebar Navigation

Element	Current (Mindous)	Target (Abacus)	Action
Home	✔ Present	✔ Present	✔ KEEP
Settings	✔ Present	✔ Present	✔ KEEP
Data Source	✔ Present	? Unknown	⚠ EVALUATE
Targets	✔ Present	? Unknown	⚠ EVALUATE
Members	✔ Present	✔ Present	✔ KEEP
Tasks	✗ Not in sidebar	✔ Present	+ ADD
Analytics	✗ Not in sidebar	✔ Present	+ ADD

Task Execution View

Element	Current (Mindous)	Target (Abacus)	Action
Task Cards	? Unknown	✔ Present (critical)	+ ADD/VERIFY
Tool Visibility Panel	? Unknown	✔ Present (critical)	+ ADD/VERIFY
Progress Counter	? Unknown	✔ Present (sticky bottom)	+ ADD/VERIFY
File Operation Badges	? Unknown	✔ Present	+ ADD/VERIFY
Real-time Updates	? Unknown	✔ Present	+ ADD/VERIFY

Note: Need to explore task execution views in current build to verify presence of these components.

10. File Removal Checklist

Phase 1: Delete Agent-Specific Files

Marketing Components

- [] app/(marketing)/components/multi-llm-hero.tsx
- [] app/(marketing)/components/llm-providers-section.tsx

LLM Components

- [] components/llm/multi-llm-workspace.tsx
- [] components/llm/llm-performance-dashboard.tsx

Planning Components

- [] `components/planning/task-decomposition-view.tsx`
- [] `components/planning/task-node-card.tsx`
- [] `components/planning/task-tree.tsx`

Task Form

- [] `components/task-form-with-planning.tsx`

Test Pages

- [] `app/(dashboard)/llm-test/page.tsx`
- [] `app/test-task-form/page.tsx`
- [] `app/test-run-progress/page.tsx`

Database Schema

- [] `db/schema/llm-routing.ts` (if exists)
- [] Any other LLM provider-specific schema files

Phase 2: Modify Existing Files

Landing Page

- [] `app/(marketing)/page.tsx` - Rewrite hero, features, testimonials
- [] `app/(marketing)/components/animated-hero.tsx` - Update messaging
- [] `app/(marketing)/components/animated-features.tsx` - Update features
- [] `app/(marketing)/components/animated-reviews.tsx` - Update testimonials

Dashboard

- [] `app/dashboard/page.tsx` - Remove multi-LLM elements
- [] `app/dashboard/analytics/page.tsx` - Remove provider-specific metrics

Components

- [] `components/header.tsx` - Remove “Multi-LLM” references
- [] `components/sidebar.tsx` - Update navigation items
- [] `components/chat/chat-interface.tsx` - Remove provider selection
- [] `components/chat/message-list.tsx` - Remove provider references

Phase 3: Add Missing Components

Task Execution

- [] Create task card component (if not exists)
- [] Create tool visibility panel component (if not exists)
- [] Create progress counter component (if not exists)
- [] Create file operation badges component (if not exists)

Navigation

- [] Add “Tasks” to sidebar navigation
 - [] Add “Analytics” to sidebar navigation (if not present)
-

11. Content Replacement Guide

Landing Page Copy

Current Hero

Orchestrate Complex Tasks Across Multiple AI Models

Mindous.ai intelligently routes each subtask to the optimal LLM provider—whether it's Abacus AI, ChatGPT, Claude, Gemini, or Qwen—ensuring peak performance and cost efficiency.

Suggested Replacement

Build Anything with AI

Mindous.ai is your intelligent AI assistant that helps you build applications, analyze data, automate workflows, and solve complex problems—all through natural conversation.

Dashboard Header

Current

Multi-LLM Workspace

Orchestrate complex tasks across multiple AI providers with intelligent routing

Suggested Replacement

Workspace

Your AI-powered workspace **for** building, analyzing, and automating

Feature Descriptions

Current Feature 1

Intelligent Task Orchestration

Break down complex tasks into optimized subtasks, each routed to the best-suited LLM provider **for** maximum efficiency and quality results.

Suggested Replacement

Intelligent Task Execution

Break down complex tasks into manageable steps with real-time visibility into what the AI is doing at every stage.

12. Technical Debt & Cleanup

Environment Variables

Review `.env.local` for:

- [] LLM provider API keys (OpenAI, Anthropic, Google, etc.)
- [] Provider-specific configuration
- [] Routing algorithm settings

Action: Remove unused provider keys, keep only what's needed.

Dependencies

Review `package.json` for:

- [] LLM provider SDKs (openai, anthropic, google-generativeai, etc.)
- [] Routing/orchestration libraries
- [] Unused dependencies

Action: Remove unused dependencies to reduce bundle size.

API Routes

Review `app/api/` for:

- [] LLM provider routing endpoints
- [] Provider status check endpoints
- [] Cost calculation endpoints

Action: Remove or modify endpoints related to multi-LLM functionality.

13. Priority Matrix

Critical (Do First)

1.  **Remove multi-LLM marketing components** - Immediate visual impact
2.  **Update landing page copy** - First impression for users
3.  **Simplify dashboard task form** - Core user interaction
4.  **Remove provider status section** - Confusing for users

High Priority (Do Soon)

1.  **Modify header navigation** - Remove multi-LLM references
2.  **Update sidebar navigation** - Add missing items, remove irrelevant
3.  **Modify chat interface** - Remove provider selection
4.  **Delete test pages** - Clean up codebase

Medium Priority (Do Later)

1.  **Evaluate data source page** - Understand purpose, keep or remove
2.  **Evaluate targets page** - Understand purpose, keep or remove
3.  **Modify analytics page** - Remove provider-specific metrics
4.  **Review database schema** - Remove unused tables

Low Priority (Nice to Have)

1. **✚ Add task cards** - If not present
 2. **✚ Add tool visibility panel** - If not present
 3. **✚ Add progress counter** - If not present
 4. **✚ Add file operation badges** - If not present
-

14. Verification Checklist

After making changes, verify:

Visual Verification

- ☐ Landing page has no “Multi-LLM” or provider references
- ☐ Dashboard has simple task input (no provider dropdown)
- ☐ Sidebar navigation is clean and relevant
- ☐ Header navigation is updated
- ☐ No provider status badges visible

Functional Verification

- ☐ Task submission works without provider selection
- ☐ Chat interface works without provider selection
- ☐ Task history displays correctly
- ☐ Analytics page shows relevant metrics
- ☐ Settings page is accessible

Code Verification

- ☐ No unused imports from deleted files
- ☐ No broken links to deleted pages
- ☐ No console errors
- ☐ Build succeeds without errors
- ☐ TypeScript types are correct

Content Verification

- ☐ All copy is updated (no “Multi-LLM” references)
 - ☐ All CTAs are updated
 - ☐ All feature descriptions are updated
 - ☐ All testimonials are updated
-

15. Estimated Effort

File Deletion

- **Effort:** Low
- **Time:** 1-2 hours
- **Risk:** Low (if files are truly unused)

Content Updates

- **Effort:** Medium
- **Time:** 4-6 hours
- **Risk:** Low (mostly copy changes)

Component Modifications

- **Effort:** High
- **Time:** 8-12 hours
- **Risk:** Medium (may break functionality)

New Component Development

- **Effort:** High
- **Time:** 12-20 hours
- **Risk:** Medium (depends on complexity)

Testing & Verification

- **Effort:** Medium
- **Time:** 4-6 hours
- **Risk:** Low

Total Estimated Time: 30-45 hours

16. Risk Assessment

High Risk Areas

1. **Database Schema Changes** - May affect existing data
2. **Task Execution Logic** - Core functionality, must not break
3. **Authentication Flow** - Critical for user access

Medium Risk Areas

1. **Navigation Changes** - May confuse existing users
2. **Component Modifications** - May introduce bugs
3. **API Route Changes** - May break integrations

Low Risk Areas

1. **Marketing Copy** - No functional impact
2. **Visual Design** - Can be reverted easily
3. **Test Page Deletion** - Not user-facing

Mitigation Strategies

- **Backup:** Create git branch before major changes
 - **Testing:** Test each change in isolation
 - **Rollback Plan:** Document how to revert each change
 - **Staging:** Deploy to staging environment first
-

17. Next Steps

Immediate Actions

1.  **Review this audit** - Ensure understanding of all changes
2.  **Prioritize changes** - Decide what to tackle first
3.  **Create git branch** - `feature/abacus-redesign`
4.  **Start with deletions** - Remove unused files first

Short-term Actions

1.  **Update landing page** - New copy and components
2.  **Simplify dashboard** - Remove multi-LLM elements
3.  **Update navigation** - Header and sidebar
4.  **Test thoroughly** - Ensure nothing breaks

Long-term Actions

1.  **Add missing components** - Task cards, tool panel, etc.
 2.  **Refine design** - Match Abacus visual style
 3.  **Optimize performance** - Remove unused code
 4.  **Deploy to production** - After thorough testing
-

18. Questions for Clarification

Before proceeding with the redesign, clarify:

1. **Data Source Page:** What is this for? Keep or remove?
 2. **Targets Page:** What is this for? Keep or remove?
 3. **Task Decomposition:** Does Abacus platform have this feature?
 4. **Analytics Scope:** What metrics should be shown?
 5. **Tools Page:** What is this for? Keep or remove?
 6. **Existing Data:** Are there existing users/tasks to preserve?
 7. **Migration Plan:** How to handle existing users during redesign?
-

Conclusion

The current Mindous build is heavily focused on **multi-LLM orchestration**, which is fundamentally different from the Abacus.AI platform's approach. The redesign will require:

1. **Significant Content Changes:** All marketing copy, feature descriptions, and UI text
2. **Component Deletion:** Remove all multi-LLM specific components
3. **Component Modification:** Simplify task forms, chat interface, dashboard
4. **Component Addition:** Add task cards, tool visibility panel, progress tracking (if not present)
5. **Navigation Updates:** Simplify sidebar, update header

Estimated Effort: 30-45 hours of development work

Key Success Factors:

- Clear understanding of Abacus platform functionality
- Thorough testing at each stage
- Incremental changes with git commits
- Staging environment for validation

Next Document: Implementation roadmap with step-by-step instructions for each change.

Document Version: 1.0

Last Updated: November 17, 2025

Author: DeepAgent Analysis Team
