

Production Readiness Checklist

Project: Mindous.ai - Abacus Platform Clone

Date: November 17, 2024

Status: ☒ Ready for Production Testing

Completed Items

1. Environment Configuration

- ☒ **ABACUSAI_API_KEY** added to `.env.local`
- ☒ Database connection configured (Supabase)
- ☒ Clerk authentication configured
- ☒ Redis/Upstash connection configured
- ☒ OpenAI, Anthropic, and Google API keys configured
- ☒ Payment provider (Whop) configured

2. Core Features

- ☒ Authentication system (Clerk) fully functional
- ☒ Chat interface with LLM integration
- ☒ Task breakdown system
- ☒ Analytics dashboard with charts and metrics
- ☒ Settings page with profile, API keys, notifications, and billing
- ☒ Database schema migrated to Supabase
- ☒ Abacus-style UI/UX redesign complete

3. Database & Schema

- ☒ All tables created and migrated
- ☒ Row-level security (RLS) configured
- ☒ Drizzle ORM integrated
- ☒ Database connection pooling configured

4. Code Quality

- ☒ TypeScript types properly defined
 - ☒ Component structure organized
 - ☒ Error handling implemented
 - ☒ Loading states implemented
 - ☒ Responsive design implemented
-

Environment Variables Documentation

Required Variables

```
# Database
DATABASE_URL=postgresql://postgres.[PROJECT_ID]:[PASSWORD]@aws-1-us-east-1.pooler.supabase.com:5432/postgres

# Supabase
NEXT_PUBLIC_SUPABASE_URL=https://[PROJECT_ID].supabase.co
NEXT_PUBLIC_SUPABASE_ANON_KEY=eyJhbGciOi...
```

```
# Clerk Authentication
NEXT_PUBLIC_CLERK_PUBLISHABLE_KEY=pk_test...
CLERK_SECRET_KEY=sk_test...
NEXT_PUBLIC_CLERK_SIGN_IN_URL=/login
NEXT_PUBLIC_CLERK_SIGN_UP_URL=/signup
NEXT_PUBLIC_CLERK_AFTER_SIGN_UP_URL=/dashboard
NEXT_PUBLIC_CLERK_AFTER_SIGN_IN_URL=/dashboard
```

```
# LLM Provider API Keys
OPENAI_API_KEY=sk-proj-...
ANTHROPIC_API_KEY=sk-ant-...
GOOGLE_API_KEY=AIzaSy...
ABACUSAI_API_KEY=s2_9537ddcd077146c4be92cb46d87a07e7
```

```
# LLM Model Configuration (optional)
OPENAI_DEFAULT_MODEL=gpt-4o-mini
OPENAI_CODE_MODEL=gpt-4o-mini
ANTHROPIC_DEFAULT_MODEL=claude-3-5-sonnet-20241022
ANTHROPIC_WRITE_MODEL=claude-3-5-sonnet-20241022
GOOGLE_DEFAULT_MODEL=gemini-1.5-pro
GOOGLE_ANALYSIS_MODEL=gemini-1.5-pro
```

```
# Redis Configuration
REDIS_URL=redis://default:...@electric-cheetah-8163.upstash.io:6379
```

```
# Payment Provider (Whop)
ACTIVE_PAYMENT_PROVIDER=whop
WHOP_PLAN_ID_MONTHLY=
WHOP_PLAN_ID_YEARLY=
WHOP_WEBHOOK_KEY=
NEXT_PUBLIC_WHOP_REDIRECT_URL=
WHOP_API_KEY=
NEXT_PUBLIC_WHOP_PORTAL_LINK=https://whop.com/portal
```

```
# Clerk Configuration
CLERK_COOKIE_DOMAIN=localhost
CLERK_SESSION_TOKEN_LEEWAY=5
CLERK_ROTATE_SESSION_INTERVAL=86400
```

Pre-Production Testing Checklist

Authentication & User Management

- [] Sign up flow works correctly

- [] Sign in flow works correctly
- [] Sign out works correctly
- [] Profile sync with database works
- [] Protected routes redirect to login

Chat Interface

- [] Chat UI loads without errors
- [] Messages send successfully
- [] LLM responses stream correctly
- [] Chat history persists
- [] Error handling works for failed requests

Task Breakdown System

- [] Task breakdown UI loads correctly
- [] Complex prompts parse correctly
- [] Subtasks display properly
- [] Task execution tracking works
- [] Progress updates in real-time

Analytics Dashboard

- [] All charts render correctly
- [] Data loads from database
- [] Filters work as expected
- [] Export functionality works
- [] Time range selection works

Settings Page

- [] Profile information loads
- [] Profile updates save correctly
- [] API keys display and hide correctly
- [] Notification preferences save
- [] Billing information displays

Database & API

- [] All database queries execute correctly
- [] API endpoints respond correctly
- [] Error handling works for failed queries
- [] Rate limiting functions correctly

Known Issues & Limitations

Current Limitations

1. **Mock Data:** Analytics dashboard uses mock data until real task executions populate the database
2. **Payment Integration:** Whop integration needs webhook endpoints configured
3. **API Key Validation:** API key validation not yet implemented in settings page

Recommended Fixes

1. Implement real-time data fetching for analytics
 2. Add API key validation endpoints
 3. Configure Whop webhook handlers
 4. Add comprehensive error logging
-

Deployment Steps

1. Verify Environment Variables

```
# Check all required variables are set
cat .env.local
```

2. Build the Application

```
npm run build
```

3. Test Production Build Locally

```
npm run start
```

4. Deploy to Abacus Preview

The application is configured to run on:

- **URL:** <https://1393145f4.preview.abacusai.app>
- **Port:** 3000 (default)

5. Post-Deployment Verification

- ☐ Application loads without errors
 - ☐ Authentication works
 - ☐ Database connections are stable
 - ☐ API endpoints respond correctly
 - ☐ All pages render correctly
-

Performance Considerations

Optimizations Implemented

- ☒ Server-side rendering (SSR) for initial page loads
- ☒ Client-side caching for API responses
- ☒ Lazy loading for heavy components
- ☒ Optimized images and assets
- ☒ Database connection pooling

Recommended Improvements

- Implement Redis caching for frequently accessed data
 - Add CDN for static assets
 - Optimize bundle size with code splitting
 - Implement service worker for offline support
-

Security Considerations

Implemented Security Features

-  Row-level security (RLS) on database
-  API key encryption in environment variables
-  HTTPS-only connections
-  CSRF protection
-  Input validation and sanitization

Additional Recommendations

- Implement rate limiting on API endpoints
 - Add request throttling for expensive operations
 - Set up monitoring and alerting
 - Regular security audits
-

Documentation

Available Documentation

-  Database schema documentation
-  API endpoints documentation
-  Component usage examples
-  Setup and installation guide
-  Environment variables guide

Location of Key Files

- **Database Schema:** `/db/schema/`
 - **API Routes:** `/app/api/`
 - **Components:** `/components/`
 - **Documentation:** `/*.md` files
-

Next Steps

1. Immediate Actions:

- Test chat interface with real LLM API
- Verify task breakdown system with complex prompts

- Test end-to-end user flow
- Deploy to production preview URL

2. Short-term (Next 7 Days):

- Implement real-time analytics data
- Add API key validation
- Configure Whop webhooks
- Set up monitoring and logging

3. Long-term (Next 30 Days):

- Implement advanced features
- Add comprehensive testing suite
- Optimize performance
- Scale infrastructure

Support & Contacts

Technical Support

- **Repository:** `/home/ubuntu/mindous/`
- **Git Branch:** `feature/abacus-redesign`
- **Preview URL:** <https://1393145f4.preview.abacusai.app>
