

Mindous.ai User Guide

Welcome to Mindous.ai - Your intelligent AI workspace for building applications, automating workflows, and solving complex problems with complete transparency.

Table of Contents

1. [Getting Started](#)
 2. [Dashboard Overview](#)
 3. [Chat Interface](#)
 4. [Task Management](#)
 5. [Task Breakdown](#)
 6. [Analytics](#)
 7. [Settings](#)
 8. [Best Practices](#)
 9. [Troubleshooting](#)
-

Getting Started

Creating Your Account

1. Navigate to the Mindous.ai homepage
2. Click **“Start Free”** or **“Sign In”** in the top right
3. Create an account using:
 - Email and password
 - Google account
 - GitHub account
4. Verify your email address
5. You'll be automatically redirected to your dashboard

First Login

Upon your first login, you'll see:

- **Welcome message** with a quick tour
 - **Empty dashboard** ready for your first task
 - **Sidebar navigation** to explore different features
 - **Usage credits** display showing your available credits
-

Dashboard Overview

The dashboard is your central hub for managing AI tasks and monitoring activity.

Main Components

1. Sidebar Navigation

Located on the left side, provides quick access to:

- 🏠 **Workspace** - Main dashboard
- 💬 **Chat** - AI conversation interface
- 📋 **Tasks** - Task management and monitoring
- 📊 **Analytics** - Performance metrics and insights
- ⚙️ **Settings** - Account and preferences

2. Start Chat Card

- Quick access to open a new chat session
- Click **“Open Chat”** to begin conversing with the AI

3. Task Breakdown Section

- Text area to describe complex tasks
- **“Break Down Task”** button to generate subtasks
- AI automatically analyzes and creates actionable steps

4. AI Tools Activity Panel

- Real-time visibility into what the AI is doing
- Shows active tools being used
- Displays file operations, API calls, and more
- Complete transparency into AI actions

5. Recent Tasks

- Quick view of your latest tasks
- Status indicators (Running, Completed, Paused, Failed)
- Click any task to view details

6. Usage Credits Display

- Shows remaining credits (e.g., “0 of 5 used”)
- “5 left” indicator
- **Upgrade** button for premium features
- Resets date display

Chat Interface

The chat interface is where you interact with the AI assistant to get help, ask questions, and initiate tasks.

Starting a Chat

1. Click **“Chat”** in the sidebar or **“Open Chat”** on the dashboard
2. You'll see a clean interface with:
 - Message history area
 - Input field at the bottom
 - Send button (paper plane icon)

Sending Messages

1. Type your message in the input field
2. Press **Enter** or click the **Send** button
3. Your message appears on the right in a blue bubble
4. AI response streams in real-time on the left

Chat Features

Message History

- All messages are saved automatically
- Scroll up to view previous conversations
- Timestamps show when each message was sent

Streaming Responses

- AI responses appear word-by-word in real-time
- Loading indicator shows when AI is thinking
- Can interrupt or stop generation if needed

Context Awareness

- AI remembers the last 10 messages in the conversation
- Maintains context across multiple exchanges
- Can reference previous messages

Example Conversations

Simple Question:

You: What can you help me **with**?

AI: I can help you build applications, analyze data, automate workflows, and solve complex problems. I can **break** down tasks into manageable steps and execute them **with** complete transparency.

Complex Task:

You: I need to build a React todo app **with** authentication and deploy it to Vercel.

AI: I'll **break this** down into steps:

1. Initialize React project **with** TypeScript
2. Set up authentication **with** Clerk
3. Build todo list components
4. Configure Vercel deployment
5. Deploy the application

Would you like me to proceed **with** these steps?

Task Management

The Tasks page provides comprehensive management of all your AI-powered tasks.

Task List View

Status Summary Cards

At the top of the page, you'll see:

- **Total Tasks** - All tasks created
- **Running** - Currently executing tasks
- **Completed** - Successfully finished tasks
- **Paused** - Temporarily stopped tasks
- **Failed** - Tasks that encountered errors

Task Cards

Each task is displayed as a card showing:

- **Task Title** - Clear description of the task
- **Status Badge** - Color-coded status indicator
 -  Green = Completed
 -  Blue = Running
 -  Orange = Paused
 -  Red = Failed
- **Timestamps** - Created and completed times
- **Subtask Progress** - e.g., "3/5 subtasks"
- **Cost** - Credits used (e.g., "\$1.89")
- **Progress Bar** - Visual percentage for running tasks
- **Action Buttons** - Context-specific actions

Task Actions

For Running Tasks:

- **View Details** - See full task breakdown
- **Pause** - Temporarily stop execution

For Completed Tasks:

- **View Details** - Review what was done
- **Download Results** - Export task outputs

For Paused Tasks:

- **View Details** - Check current state
- **Resume** - Continue execution

For Failed Tasks:

- **View Details** - See error information
- **Retry** - Attempt task again

Filtering and Search

Status Filter

- Click tabs to filter by status:
- **All (5)** - Show all tasks
- **Running (1)** - Only active tasks
- **Completed (2)** - Finished tasks
- **Paused (1)** - Stopped tasks
- **Failed (1)** - Error tasks

Search Bar

- Type to search task titles and descriptions
- Real-time filtering as you type
- Case-insensitive search

Export Report

- Click **“Export Report”** button
 - Downloads comprehensive task report
 - Includes all task details and metrics
-

Task Breakdown

The Task Breakdown feature uses AI to decompose complex tasks into manageable subtasks.

How It Works

- 1. Describe Your Task**
 - Enter a detailed description in the text area
 - Be specific about what you want to accomplish
 - Include any requirements or constraints
- 2. Generate Breakdown**
 - Click **“Break Down Task”** button
 - AI analyzes your request
 - Generates structured subtasks with dependencies
- 3. Review Subtasks**
 - Each subtask includes:
 - Clear title and description
 - Estimated duration
 - Dependencies on other subtasks
 - Order of execution
- 4. Edit and Approve**
 - Modify subtasks if needed
 - Reorder steps by dragging
 - Add or remove subtasks
 - Click **“Approve & Execute”** to start

Example Task Breakdown

Input:

Create a simple todo list web application with React, add authentication, **and** deploy it to Vercel

Generated Breakdown:

- 1. Initialize React project with TypeScript**

- Duration: 15 minutes
- Dependencies: None

1. Implement authentication with Clerk

- Duration: 30 minutes
- Dependencies: Step 1

2. Build todo list components

- Duration: 45 minutes
- Dependencies: Steps 1, 2

3. Deploy to Vercel

- Duration: 20 minutes
- Dependencies: Step 3

Total Estimated Duration: 110 minutes

Best Practices for Task Descriptions

✓ Good Examples:

- "Build a React dashboard with charts showing sales data from a CSV file"
- "Create a Python script to scrape product prices from Amazon and save to database"
- "Design a landing page for a SaaS product with pricing tiers and testimonials"

✗ Avoid:

- "Make a website" (too vague)
- "Do something with data" (unclear objective)
- "Fix the bug" (no context provided)

Analytics

The Analytics page provides insights into your task execution and AI usage.

Available Metrics

Task Analytics

- **Total Tasks** - Number of tasks created
- **Success Rate** - Percentage of completed tasks
- **Average Duration** - Mean time to complete tasks
- **Performance** - Overall efficiency metrics

Cost Analytics

- **Total Spend** - Credits used across all tasks
- **Cost per Task** - Average credit usage
- **Cost Trends** - Spending over time

LLM Usage

- **Total Requests** - API calls made
- **Tokens Used** - Total token consumption
- **Model Distribution** - Usage by AI model

Coming Soon

The analytics dashboard is being enhanced with:

-  **Interactive Charts** - Visual data representation
 -  **Detailed Reports** - Exportable analytics
 -  **Performance Insights** - AI-powered recommendations
 -  **Time-based Analysis** - Daily, weekly, monthly views
-

Settings

Manage your account preferences and configuration.

Account Settings

Profile Information

- Update name and email
- Change password
- Manage connected accounts

Preferences

- Theme selection (Light/Dark)
- Notification settings
- Language preferences

API Access

- Generate API keys
- View usage limits
- Manage webhooks

Billing & Usage

Current Plan

- View active subscription
- See included credits
- Check renewal date

Upgrade Options

- **Free Plan** - 5 credits/month
- **Pro Plan** - 100 credits/month
- **Enterprise** - Unlimited credits

Usage History

- Credit consumption over time
 - Detailed transaction log
 - Download invoices
-

Best Practices

Writing Effective Prompts

Be Specific

✗ “Build a website”

✓ “Build a React website with a homepage, about page, and contact form using Tailwind CSS”

Provide Context

✗ “Analyze this data”

✓ “Analyze this sales data CSV file and create a report showing monthly trends, top products, and revenue forecasts”

Break Down Complex Requests

✗ “Create a full e-commerce platform”

✓ “First, let’s create the product catalog page with filtering and search functionality”

Managing Tasks Efficiently

Monitor Progress

- Check the Tasks page regularly
- Review AI Tools Activity panel
- Watch for errors or warnings

Pause When Needed

- Pause tasks if you need to make changes
- Review intermediate results
- Resume when ready to continue

Learn from Failures

- Check failed task details
- Understand what went wrong
- Adjust your approach for next time

Optimizing Credit Usage

Combine Related Tasks

- Group similar operations together
- Reduces overhead and saves credits

Use Task Breakdown

- Better planning = fewer retries
- Clear subtasks = efficient execution

Review Before Executing

- Double-check task descriptions
 - Ensure requirements are clear
 - Avoid unnecessary iterations
-

Troubleshooting

Common Issues

Chat Not Responding

Symptoms: Message sent but no AI response

Solutions:

1. Check your internet connection
2. Refresh the page
3. Try sending the message again
4. Contact support if issue persists

Note: Currently requires `ABACUSAI_API_KEY` configuration

Task Breakdown Fails

Symptoms: “Break Down Task” button doesn’t generate subtasks

Solutions:

1. Ensure task description is clear and detailed
2. Check that you have available credits
3. Try simplifying the task description
4. Refresh the page and try again

Note: Currently requires `ABACUSAI_API_KEY` configuration

Task Stuck in “Running” Status

Symptoms: Task shows as running but no progress

Solutions:

1. Wait a few minutes (some tasks take time)
 2. Check the AI Tools Activity panel for updates
 3. Click “View Details” to see current step
 4. If stuck for >10 minutes, click “Pause” then “Resume”
-

Authentication Issues

Symptoms: Logged out unexpectedly or can’t access features

Solutions:

1. Clear browser cookies and cache
 2. Log out and log back in
 3. Check that your email is verified
 4. Try a different browser
-

Getting Help

In-App Support

- Click the help icon (?) in the top right
- Access documentation and guides
- Submit a support ticket

Community

- Join our Discord server
- Browse community forums
- Share tips and tricks

Contact Us

- Email: support@mindous.ai
 - Response time: Within 24 hours
 - Priority support for Pro/Enterprise users
-

Keyboard Shortcuts

Global

- `Ctrl/Cmd + K` - Open command palette
- `Ctrl/Cmd + /` - Toggle sidebar
- `Ctrl/Cmd + ,` - Open settings

Chat Interface

- `Enter` - Send message
- `Shift + Enter` - New line
- `Esc` - Clear input
- `↑` - Edit last message

Task Management

- `Ctrl/Cmd + N` - New task
 - `Ctrl/Cmd + F` - Search tasks
 - `Space` - Pause/Resume selected task
 - `Delete` - Delete selected task
-

Tips & Tricks

Power User Features

1. Batch Operations

Select multiple tasks and perform actions on all at once:

- Pause multiple running tasks
- Delete completed tasks
- Export multiple task results

2. Task Templates

Save common task patterns as templates:

- "Build React App"
- "Data Analysis Pipeline"
- "API Integration"

3. Custom Workflows

Chain tasks together for complex workflows:

- Task A completes → Task B starts automatically
- Conditional execution based on results
- Parallel task execution

4. Advanced Filtering

Combine multiple filters:

- Status + Priority + Date range
- Tags + Search terms
- Custom saved filters

Security & Privacy

Data Protection

- All data encrypted in transit (TLS 1.3)
- Encrypted at rest in database
- Regular security audits
- GDPR compliant

Privacy

- Your tasks and chats are private
- Not used for AI training without consent
- Can export or delete all data anytime
- Transparent data usage policies

Authentication

- Secure authentication via Clerk
- Two-factor authentication available
- Session management and timeout
- OAuth integration (Google, GitHub)

Frequently Asked Questions

General

Q: Is Mindous.ai free?

A: Yes! We offer a free plan with 5 credits per month. Upgrade to Pro for more credits and features.

Q: What are credits?

A: Credits are used to execute tasks. Each task consumes credits based on complexity and duration.

Q: Can I cancel anytime?

A: Yes, cancel your subscription anytime. You'll retain access until the end of your billing period.

Technical

Q: What AI models does Mindous.ai use?

A: We use GPT-4.1-mini, Claude 3.5 Sonnet, and Gemini 1.5 Pro, automatically selecting the best model for each task.

Q: Can I use my own API keys?

A: Enterprise users can configure custom API keys. Contact sales for details.

Q: Is there an API?

A: Yes! Check our [API Documentation](#) (./API_ENDPOINTS.md) for details.

Billing

Q: How do credits work?

A: Each task consumes credits based on:

- AI model used
- Task complexity
- Execution time
- Resources required

Q: What happens if I run out of credits?

A: Tasks will be paused. Upgrade your plan or wait for monthly credit reset.

Q: Can I buy additional credits?

A: Yes, purchase credit packs anytime from the Settings page.

Changelog

Latest Updates

Version 1.0.0 (November 2025)

- 🎉 Initial release
 - ✨ Chat interface with streaming
 - 📋 Task management system
 - 🔍 Task breakdown with AI
 - 📊 Analytics dashboard
 - 🔑 Clerk authentication
 - 🗄️ Supabase database integration
-

What's Next?

Upcoming Features

Q1 2026

- 🎨 **Custom Themes** - Personalize your workspace
- 🔔 **Real-time Notifications** - Get instant updates
- 📱 **Mobile App** - iOS and Android apps
- 🤝 **Team Collaboration** - Share tasks and workspaces

Q2 2026

- 🔌 **Integrations** - Connect with Slack, GitHub, Notion
- 🎯 **Advanced Analytics** - ML-powered insights
- 🚀 **Workflow Automation** - No-code automation builder
- 💬 **Voice Interface** - Talk to your AI assistant

Feedback & Suggestions

We'd love to hear from you!

- 💡 **Feature Requests** - Vote on our roadmap
- 🐛 **Bug Reports** - Help us improve
- ★ **Reviews** - Share your experience
- ✉️ **Contact** - feedback@mindous.ai

Thank you for using Mindous.ai!

Build anything with AI. Complete transparency. Unlimited possibilities.
